

Additional Admissions Requirements and Recommendations

SAT/ACT/Placement Testing

Though not required, NHTI recommends that students submit scores for standardized national college admission tests taken within the last 5 years. These scores may be used to waive the placement testing requirements.

Mathematics Requirement

All of our degree programs require the successful completion of at least one semester of college-level mathematics. NHTI recommends students complete high school Algebra I with a C or better prior to NHTI admission. Many STEM programs require additional math for admissions. If a student's placement testing does not demonstrate readiness for college-level mathematics, their degree program may take more than 2 years to complete.
